## CONDENSING UNIT: ASC/ASH

### Casing

- Casing made of galvanized steel sheet metal painted with a white RAL 9002 powdered polyester paint and a RAL3003 red stripe.
- Rigid, hot dipped galvanized chassis.
- Unit lifting and handling via the base frame.
- Side grilles as option to protect the unit during transportation and against human aggressions.

### High efficiency multiscroll technology

- Exclusive Compliant Scroll® design with both axial and radial compliance to increase compressor operation tolerance to liquid refrigerant, substantially improving durability and reliability.
- Motor cooled by suction gas.
- Motor protection device against high temperature or over current situations.
- Discharge non-return valve.
- Crankcase heater as standard on heat pump and optional with winter operation down 0°C for cooling only units.
- Direct on line start.
- Low noise scroll compressors insulated with a compressor acoustic jacket.
- Compressors mounted on high efficiency cellular polyurethane vibration absorbers.

### Advanced condenser fan design

Fan-motor assembly using external rotor technology associated with OWLET high performance aluminum fan blades of the latest fan technology to improve energy consumption and airflow rate on the outdoor coils while reducing sound power level. Axial fans speed are 700 or 900 rpm according to models, direct coupling, with available static pressure up to 75 Pa as standard.

Pressure version for size 100 to 230 : speed axial fans are 1450 RPM, direct coupling, with available static pressure up to 250 Pa.

### Heat exchanger

Made of copper tubes and aluminum corrugated swirl fins, the coil heat exchanger are designed to maximize the output.

### Refrigerant circuit:

ASC/ASH units operate with R410A refrigerant.

For cooling only units, each circuit includes as standard:

- High pressure switch with automatic reset.
- Low and high pressure transducers.

On heatpump units, each circuit includes in addition, as standard:

- Four-way valve
- Liquid receiver
- Thermostatic expansion valve
- Filter drier

Each refrigerant circuit is pressure and leak tested with a Hydrogen/Nitrogen mixture, and vacuumed before being charged with nitrogen. All units are then subjected to a complete functional

and operational run test to guarantee perfect sealing before leaving the factory.

### Electrical box:

- Unit wiring in compliance with standard EN 60204-1.
- IP54 water protection.
- Circuit breaker protection for compressors and fans.
- Compressor and fan working contactors.
- Terminal block and wiring for power supply to the unit.
- Power supply 400V/3/50Hz without neutral except for size 20S with neutral.

## PLUG AND PLAY UNIT

### Power supply

To make installation easier, ASC/ASH power supply does not require «neutral» connection. It is powered by 400 V, 3 phases, 50 Hz except size 20S

### Circuit breakers

To improve the safety of the ASC/ASH and extend its life, circuit breakers protect against over-loading, over intensity and a disconnected supply phase. Maintenance is also improved as there is no requirement to change fuses. The electrical panel is manufactured in accordance with EN60204-1 (1998) electrical directive.

### Refrigerant pressure reading

No need to access to refrigerant pressure gauges.

Refrigerant pressures and superheat on each circuit can be read directly on the service display DS60 or a BMS as all units are equipped with high and low pressure transducers and refrigerant suction temperature probes

### Easy access

All access to internal components of the ASC/ASH units are closed by panels equipped by locks and handle for quick and easy dismounting. No more screws are used as panel fixtures.

## ENERGY SAVINGS

### R410A refrigerant

Efficient systems such as ASC/ASH are designed around R410A refrigerant to achieve the best performances.

- Energy efficient refrigerant tanks with pressure drop in the pipes: Higher evaporating pressure and lower condensing pressure improve compressor EER & COP.
- R410A compressors have a better isentropic efficiency.
- Environmentally friendly refrigerant: It contains No Chlorine (ODP = 0).

### Dynamic and alternate defrost

Defrost is necessary to ensure efficient operation of heat pumps in winter. The unit starts defrost cycle when the outside temperature is below a set temperature and repeat the defrost cycles periodically. It results sometimes in starting an expensive defrost cycle when it is very cold outside but very dry, or too warm, in other words when the coil is not frozen.

- Dynamic defrost is Lennox' answers to unnecessary defrost cycles. Dynamic defrost detects icing of the coil by monitoring the difference between refrigerant and outside temperature and starts the defrost cycle only when required. Under certain conditions a rooftop unit equipped with this built in dynamic defrost feature can run several hours in heat pump mode without starting any defrost cycle. Dynamic defrost can save up to 15% on annual energy consumption.
- Alternate defrost saves energy by reducing the need for auxiliary heating during defrost cycles. With Alternate defrost when one circuit starts a defrost cycle the other circuit is running in heat pump at full capacity to minimize the need for auxiliary heating.

### Morning anticipation and dynamic set point

The unit can be programmed to switch-on in the morning to reach the occupied zone temperature set point just in time.

Dynamic set point can be used in summer to offset the ambient temperature set point according to the outdoor temperature. This is to avoid large temperature difference between indoor and outdoor. The indoor temperature set point would then increase with the outdoor temperature improving comfort and saving large amount of energy

### Scheduling / Time zone Management

In order to ensure the unit perfectly matches the requirements of the most difficult applications in terms of occupation and varying internal loads, the CLIMATIC 60 offers now up to 7 time zones per day (Z0 to Z6) adjustable by steps of 10 minutes. Each time zone can be programmed to follow one of four possible operating modes: A,B,C & D

## CONTROL

The new generation of microprocessor based control, CLIMATIC 60 equip the ASC/ASH range.

It inherits more than 20 years of technology and field operating experience from its predecessors Climatic control platforms. CLIMATIC 60 controller intelligently improves efficiency and helps set up and service operations to guarantee long lasting performance.

CLIMATIC 60 is designed to provide the best energy efficiency throughout unit's life cycle while ensuring reliable and consistent operation with user friendly interfaces.

This new controller constantly monitors more machine parameters than ever to improve unit operation and maximize efficiency and reliability

The PI algorithm of the CLIMATIC 60 controls the supply air temperature and a temperature difference between supply and return. It is able to optimize the refrigeration circuit operation to match perfectly the required cooling or heating load maximizing efficiency and comfort.

It will also improve reliability with features such as compressor operating limits monitoring, (High and Low refrigerant pressure and temperature now measured and displayed on DS60 and Bus) refrigerant leak detection or compressor operating time equalization and protection against excessive short cycling.

### Faults and alarms

CLIMATIC 60 manages more than 90 different faults and alarms codes and can store the last 32 with time and date. The stored faults and alarms can then be displayed on the DS60 and on the communication bus with the full text detail.

### BE60 Extension control board

This board has been developed for any customer who wants to take over the control of the unit using digital or analogue input signal. With this dry contact board option the customer can set:

- 4 digital inputs (On/Off, clear faults, various component unloading, heating priority modifications, thermostat orders....)
- 4 digital Outputs (alarms reporting, components status, scheduling time zone and operating mode status, cooling, heating, defrost and auxiliary heating status...)
- Up to 4 analogue inputs (external temperature humidity probes, fresh air input signal, force fan speed and temperature setpoint offset).
- 1 analogue output (Humidifier)

Note that CLIMATIC controller always stays in charge of all safety algorithms, defrost operation and free-cooling.

The BE60 expansion board is an additional board fixed on DIN rail, delivered as standard.

## REFRIGERATION OPTIONS

### Winter cooling operations down to 0 °C

This option allows the ASC/ASH to operate in cooling mode with an outside temperature down to 0°C (instead of 15°C on the standard unit).

This is especially needed when free-cooling operation is not possible. This function is made of condenser fan alternate start/stop that maintains a constant condensing pressure.

This equipment is standard on heat pump versions

### Winter cooling operations down to -15 °C

Unit fitted with variable speed fans. This option also allows cooling operation in very low outside temperature (-15°C), with good performance on condenser fan, belt lifecycle extension and starting peak current reduction.

Strongly recommended for applications where cooling is required during winter.

### Active Acoustic Attenuation System with variable speed fans

Low Noise option consists in an acoustic jackets. Besides, with the variable speed fan included in Winter cooling operations down to -15 °C option, the CLIMATIC 60 controls the fan speed limited by the Smart Acoustic System which allows progressive adaptation of the unit to the building load while respecting the noise level constraints and the operating limits.

The maximum sound level and the fan strategies can be adjusted according to the schedule mode in order to benefit from the different modes "Auto", "Auto Quiet" and "Quiet" operation as well as in heating or cooling mode.

The Active Acoustic Attenuation System can be adjusted according to the scheduling and can take different values for each schedule mode.

### Service valves

This option consists in liquid and gas service valves that isolate the refrigerant section during maintenance. This is particularly useful when components of the circuit have to be changed. It reduces the time and cost of maintenance operation.

## INSTALLATION AND SAFETY OPTIONS

### Main disconnect switch

Main disconnect switch is lockable to make a safe access to electrical panel. It is installed on the electrical panel door of the compressor section and controls all parts. It is also used as emergency cut off: it is mandatory to guarantee a proper access to this switch. Main disconnect switch is sized accordingly to the options fitted in the unit.

### Compressor electrical protection

Return lock against 3 phases inversion at installation. This protection prevents the Scroll compressor from starting and operating in the wrong sense: in case of the electrical phases are wrongly connected, the compressor will not start. The compressor electrical protection option is particularly required when the installation of the air conditioning unit is made before the electrical wirings.

### Anti-vibration mounts rubber type (supplied loose)

These parts reduce the transmission of vibration to the ground and the general sound level. They are fixed under the unit at the points specified by our technical drawing.

### Pallet packaging

This unit protection option is wooden pallet packaging with plastic bag useful during potentially bad shipment condition: long distance by truck or container.

## EXTENDED LIFECYCLE

Assembly quality, compliance to PED 97-23, EN 60204-1, CE, made in an ISO 9001v2000 factory.

What makes the difference are the small details which have given LENNOX its reputation. Electrical components are selected to the highest standards, refrigeration components are generously sized to ensure maximum performance and reliability. Quality manufacturing procedures together with a culture of continuous improvement at all LENNOX factories, ensures the products are built to the highest standards.

ASC/ASH complies to EN60204 norms, PED 97-23 directive, is CE compliant and is built in an ISO 9001 certified Factory

## CONTROL AND COMMUNICATIONS OPTIONS

### DC60 remote comfort display (supplied loose)

This is a remote controller for non-technical customer. It has been designed to aesthetically fit inside a room and be very easy to use. It can be installed at maximum 50 meters from the unit. There are two levels : In the first level, ambient temperature is provided and the setpoint temperature or offset to this setpoint temperature can be adjusted (according to settings and rights offered by the technician). The unit can be turned On and Off in this level. The full level additionally provides information such as outdoor temperature, supply temperature, ambient humidity level, air quality, fresh air damper opening percentage, time zone and working mode of the given time zone. DC60 Comfort display shows faults number when the unit is in the failure mode. Customer can reset fault thanks to a combination of keys. Time and day of the unit can be seen and modified easily through the DC60.

### DS60 Service display (supplied loose)

This plug and play service display and controller allows maintenance staff to set up, read and modify all unit parameters (unit settings, operating time and number of compressor starts, low and high pressure reading, airflow rate of supply fan, and read the history of last 32 faults...).

This controller has been designed to be very user-friendly, with 6 different keys and a graphic display. It includes scrolling menus and full text (no codes) explanation. It is available in English or other languages.

### DM60 Multi-units display (supplied loose)

The DM60 remote display can manage up to 8 units on a single Bus. On a multiunit site it makes the installation less expensive because, not only because of DM60 price, but because only one bus-wire has to be connected down to the DM60. In addition to the functions offered by the DC60 display, the DM60 display provides the percentage of power factor for compressors and auxiliary heater. Moreover DM60 display allows to set time zones and to modify working modes for the given time zone. These information are available for each of the units connected to the Bus. It can be installed up to 1000 meters from the unit.

### Modbus communication interface RS485

Communication card using ModBus protocol with RS485. Communication interface with a building management system.

### BACnet® communication interface RS485

Communication card using Bacnet® protocol with RS485. Communication interface with a building management system.

### LonWorks® communication interface

Communication card using LonTalk® protocol. Communication interface with a building management system.

### Modbus or BACnet® communication interface TCP/IP

Communication card using Bacnet ® or Modbus with TCP/IP. Communication interface with building management system.

Capacity steps %	Standard	0-100 %		0-50-100 %	0-59-100 %	0-62-100 %	0-50-100 %	0-53-100 %	0-50-100 %
	Non Standard Request (NSR)	0-100 %		0-50-100 %	0-33-66 100 % <sup>(1)</sup>			0-25-50-100 <sup>(1)</sup>	

(1) : The unit balances the operation of its compressors (number of starting/operating times), capacity steps are the average of possible steps.

**CORRECTION FACTORS**

To find out the performances for units installed with air ducts, apply the following coefficients on capacity and consumption data, over the performance tables of standard fan units without ducts.

**Cooling mode**

		Version	Models	Available static pressure Pa	Maximum ambient temperature °C	Correction factor for cooling capacity	Correction factor for power consumption (FP1 only)
Air available static pressure up to	50 Pa	Standard	020S → 200D	30	43	0.95	1.06
				50	39	0.89	1.16
	125 Pa	FP1 Low speed	100D → 200D (230D)	50	45 (38)	0.964	1.072
				75	42 (35)	0.935	1.094
				100	38 (-)	0.9	1.174
				125	36 (-)	0.856	1.269
				150	47 (43)	1.01	0.98
	250 Pa	FP1 High speed	100D → 200D (230D)	200	44 (40)	0.97	1.037
				250	41 (37)	0.94	1.099

**Heating mode**

		Version	Models	Available static pressure Pa	Maximum ambient temperature °C	Correction factor for heating capacity	Correction factor for power consumption (FP1 only)
Air available static pressure up to	50 Pa	Standard	020S → 200D	30	-9	0.94	1.02
				50	-8	0.89	1.03
	125 Pa	FP1 Low speed	100D → 200D (230D)	50	-10 (-8)	1	1
				75	-8 (-6)	0.94	1.02
				100	-6 (-)	0.89	1.03

## COMFORT AND SERVICE TERMINAL CONNECTION

## DRY CONTACT BOARD CONTROL

The ASC/ASH condensing unit can be remotely controlled via dry contacts on the BM60 and BE60.

The expansion board BE60 is an additional board fixed on DIN rail. This board is supplied in stand on ASC/ASH condensing unit.

Description of the various connectors :

- 1 Power supply of the board
- 2 Analog output 0/10V : not used
- 3 Network bus to the CLIMATIC 60 BM60
- 4 4 digital inputs : dry contacts only
- 5 LED status of the network bus
- 6 Serial address dip-switch of the network bus
- 7 4 analog input configurable by pair B1-B2 and B3-B4
- 8 4 digital outputs : dry contact only

6 digital inputs are dry contacts. They are factory configured as follow :

**2 inputs on the BM60**

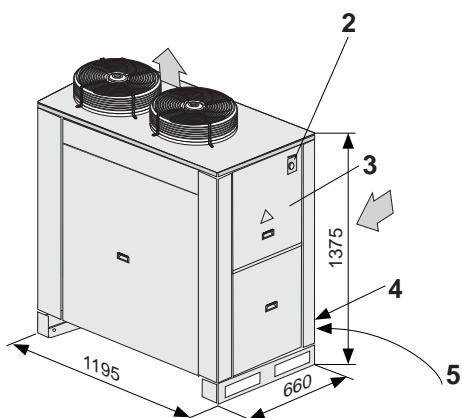

- BM-J4-ID4 : TCB B = Cooling/Heating - Contact closed = the unit operates in heating mode and open contact = the unit operates in cooling mode
- BM-J4-ID7 : TCB G = On/Off - Contact closed = On.

**4 inputs on the BE60**

<b>2</b>	Main switch (option)	<b>4</b>	Power supply cable entry
<b>3</b>	Electrical box	<b>5</b>	Access to gas and liquid lines

## UNITS WITH HIGH PRESSURE FANS

This option is available only for outdoor units, sizes 100D, 120D and 140D.  
Available static pressure up to 250 Pa.

## CLEARANCES

Space should be left free for access or servicing, to ease the installation of cables, drainage connections, electric installation and cleaning filters, as well as easy access to the unit.
